Creative Strategies and Digital Storytelling for: Willst du mit mir geh’n?

Salwa Mustafa

Project Goals & Challenges

Goals

- Build a website that's user-friendly, clear, and visually professional.
- Use layout and flow to tell a story—guiding users like the walk itself would.
- Showcase the podcast as an interactive experience, not just an audio file
- Motivate visitors to explore and listen through emotion-driven design
- Provide clear instructions for accessing and enjoying the podcast
- Design for both desktop and mobile—ensuring it looks good and works smoothly across devices

Challenges

- Working within WordPress limitations—less flexibility for immersive design
- Ensuring a modern layout despite outdated default styles
- Balancing clear guidance with a sense of mystery and discovery
- Creating a polished mobile version—dealing with clunky formatting and layout issues on smaller screens

Research

- Tested the old website with a random user outside the team, using a one-click entry to observe natural interaction and navigation
- Gathered targeted feedback on layout clarity, user expectations, and visual hierarchy for smoother usability
- Explored a real-world walking route (not Bohemian Secrets) to capture responses to audio pacing, emotional tone, and overall experience
- Analyzed insights to identify usability issues and translate user needs into actionable design improvements

User Journey

Homepage Arrival → Audiowalk Discovery → Content Interaction → Closure and Reflection

Homepage Arrival

- Need: Understand the purpose of the project immediately
- Pain Point: Site feels vague—user unsure what experience to expect

Audiowalk Discovery

- Need: Easy access to audio content with clear context
- Pain Point: Struggles to locate podcast or story section easily

Content Interaction

- Need: Emotional engagement and intuitive playback experience
- Pain Point: Design elements and storytelling pacing feel disconnected

Closure and Reflection

- Need: Option to revisit, share, or leave feedback
- Pain Point: No clear space or invitation to reflect or continue journey

Persona

Alex- 25 year old

- Personality:
  - Friendly, but shy in group settings
  - Introverted; enjoys quiet, reflective activities
  - Curious; loves discovering overlooked places
  - Thoughtful and deep-thinking
- Interests:
  - Passionate about storytelling podcasts, especially around history and local culture
  - Enjoys exploring Berlin with structure and intention
  - Drawn to artistic and cultural experiences
- Goals & Motivations:
  - Feels bored by routine and wants to discover Berlin in a unique, engaging way
  - Seeks activities that offer depth and personal insight
  - Values time alone but craves meaningful experiences beyond the everyday
- Challenges:
  - Struggles to break out of his usual patterns
  - Often feels disconnected from his surroundings, despite living in the city

Communication Concept

Communication Concept

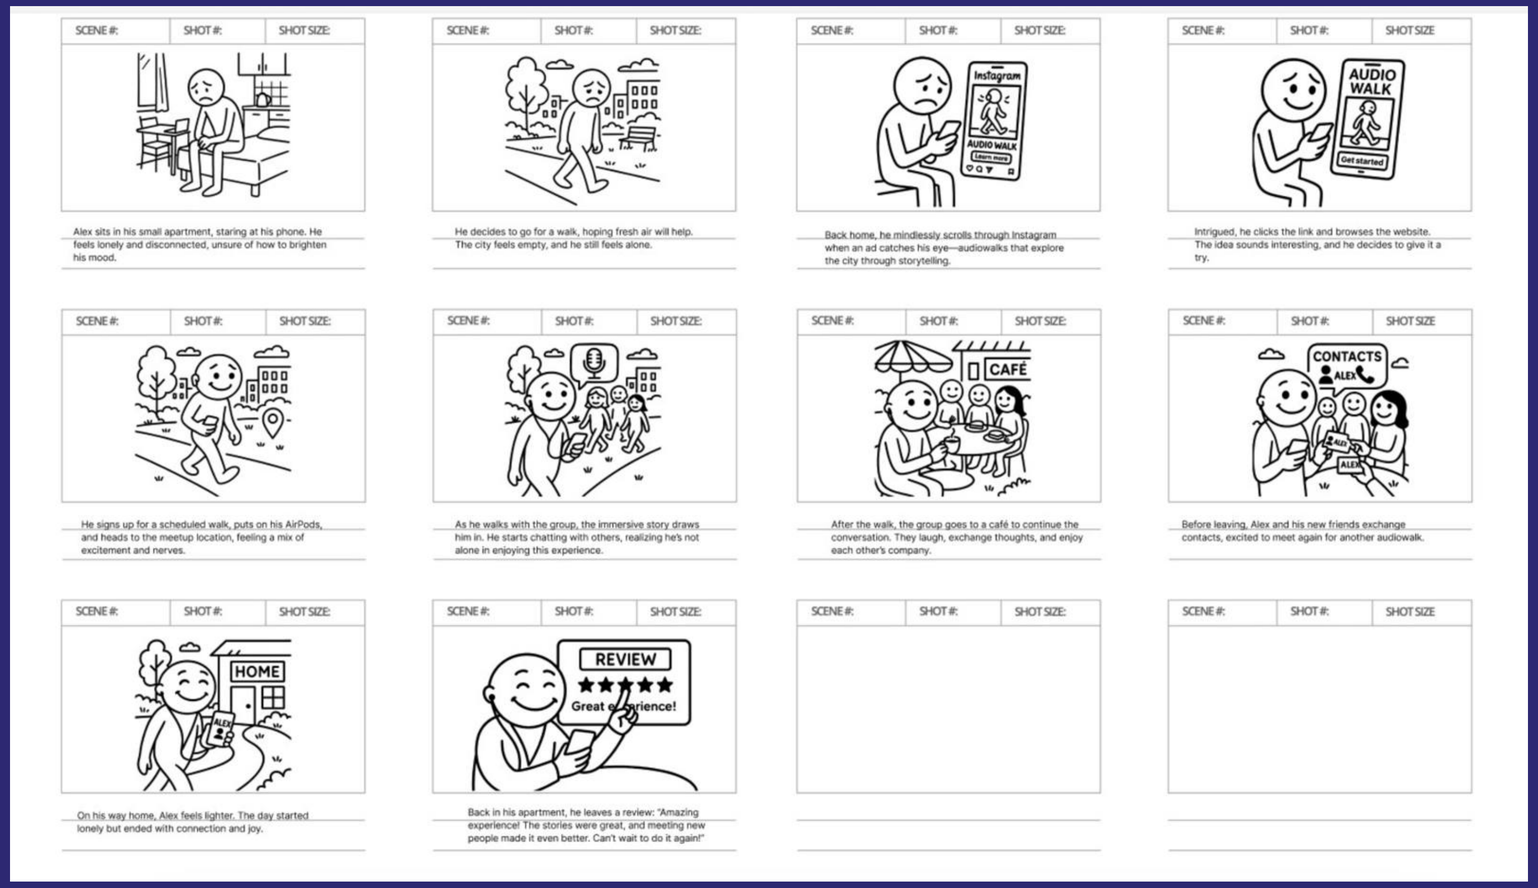

- The website uses a gentle, exploratory tone—inviting users to discover the audiowalk experience at their own pace
- Visuals and layout support a story-driven narrative, making the walk feel intuitive and emotionally engaging
- Instructions are kept clear and minimal, avoiding overload while guiding users step-by-step
- Emphasis on curiosity and atmosphere rather than hard-selling—it's about sparking interest organically

Target Group

- Urban explorers and podcast listeners interested in alternative cultural experiences
- People curious about local history, soundscapes, and self-paced discovery
- Users with basic tech comfort, navigating via phone or desktop—but not necessarily design experts
- Age range: likely 20–40, including students, creatives, and slow-travel enthusiasts
- Language: Primarily German and English, with bilingual cues for accessibility

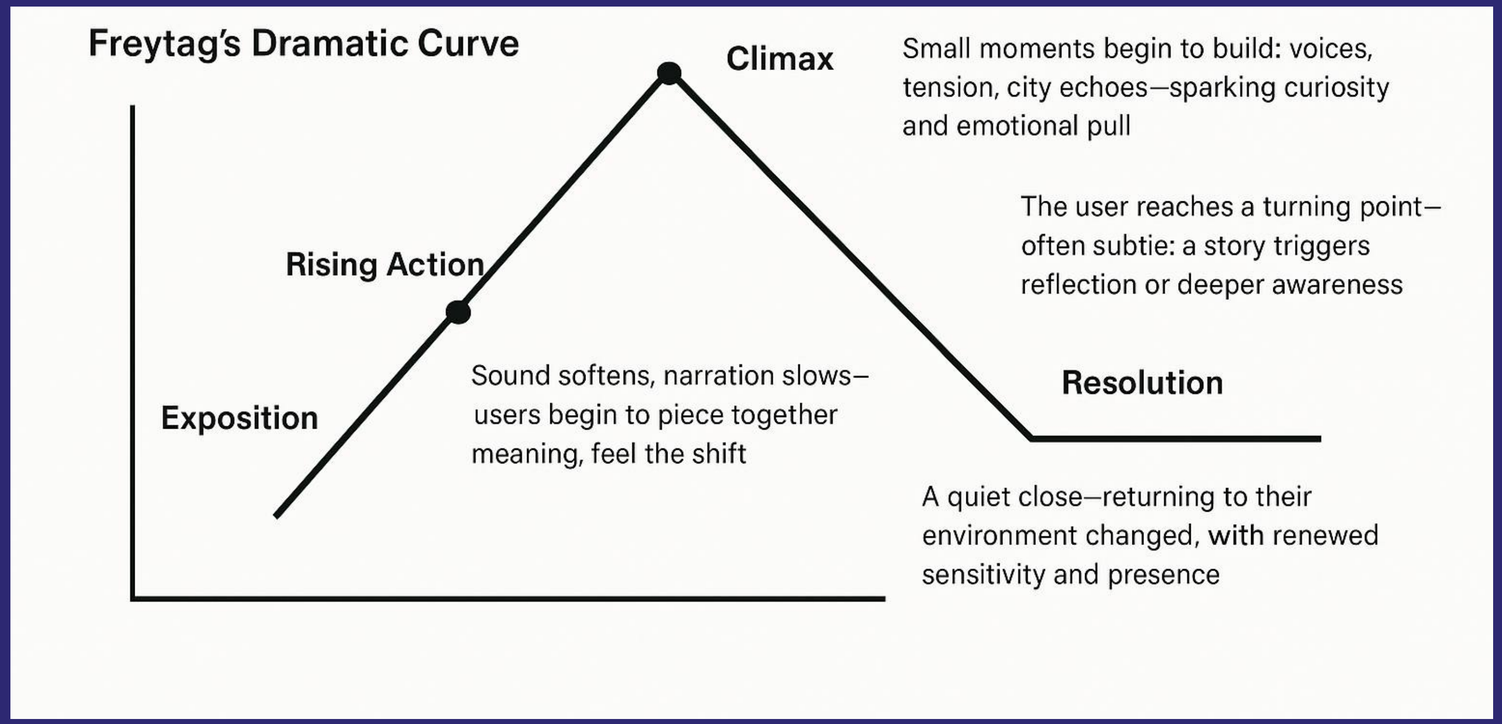

Hero's Journey

This storyboard reflects an earlier version of the concept, which emphasized group interaction. The approach has since shifted to focus more deeply on solo listening—highlighting the immersive power of sound rather than social connection.

Storytelling Concept

The Audiowalk is designed as a quiet emotional arc—inviting users into a layered journey through sound, atmosphere, and inner reflection.

Leading Visual Idea

The design centers on dynamic calm—balancing deep blues with warm reds to evoke reflection and momentum. It supports a storytelling tone that's clear, emotionally tuned, and quietly powerful.

Design Keywords

- Bold Contrast: deep blues meet muted reds for depth and warmth
- Layered Simplicity: clean layouts with subtle visual rhythm
- Emotional Focus: visuals highlight presence, not spectacle
- Guided Discovery: design leads the user gently—not forcefully
- Sonic Texture: shapes and spacing echo the feeling of sound

Logo Adjustment

- Map Point: Reshaped to be smoother and more geometric — avoiding the previous warped look that felt unpolished.
- Speaker Icon: Lines now have consistent stroke weight for cleaner, more balanced acoustics.
- Center Alignment: Elements are symmetrically placed, reinforcing presence and visual confidence.
- Tagline Removed: The phrase "DER AUDIOWALK PODCAST" was excluded to simplify the logo and let the main title stand on its own.

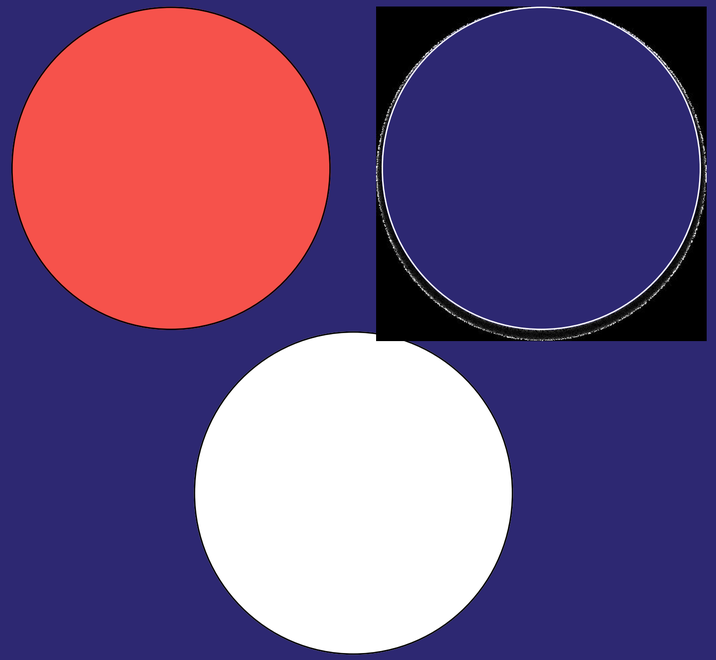

Color Balance

The design uses color as emotional rhythm—guiding users through the experience without overwhelming them. Each tone plays a narrative role:

- F7524C (Warm Red): Signals warmth, human presence, and moments of intensity. It marks invitations to engage or reflect—like a story turning point.
- FFFFFF (White): Creates open breathing space. It allows the sound and content to stand out, reinforcing the theme of quiet attention.
- 2E2973 (Deep Blue): Represents depth and introspection. It anchors the emotional journey and gives visual weight to the user's experience.

The overall tonality is calm but expressive—minimal layout, soft spacing, and bold accents. Each visual cue helps users stay present, guiding discovery through feeling rather than instruction.

Typography

Avenir

In this project Avenir is the primary typeface for the Audiowalk interface because its gentle geometry and high legibility complement the project's quiet, reflective mood.

- Balanced tone: Avenir's modern structure feels clean without being cold — ideal for a meditative digital experience.
- High readability: The clear, open letterforms support user focus, especially on mobile screens and in low-light settings.
- Emotional subtlety: Its rounded edges evoke softness, aligning with the podcast's mindful pacing and personal storytelling.
- Versatile weight range: From Light to Medium, it allows for a clear hierarchy while maintaining visual harmony.
- Consistency with visuals: Works seamlessly with the color palette and layout, reinforcing clarity and presence throughout the user journey.

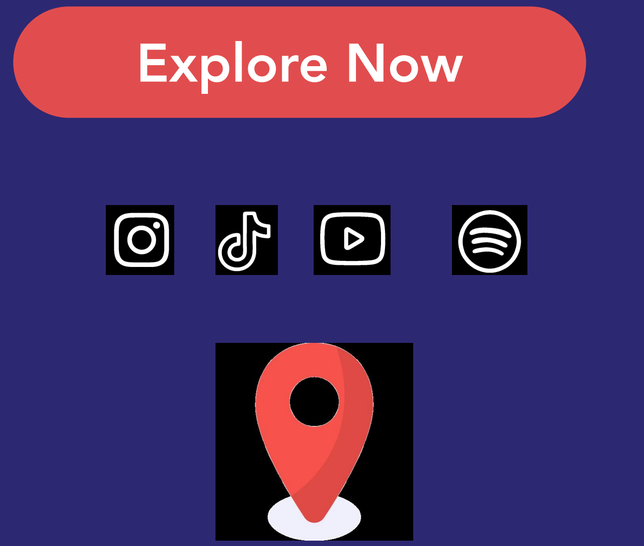

UI Elements

Buttons

- Labeled with direct actions (Listen, Donate, Start Walk) to reduce cognitive load
- Rounded corners and subtle shadows give a soft, touch-friendly feel
- Use of warm accent colors to signal engagement and emotional moments

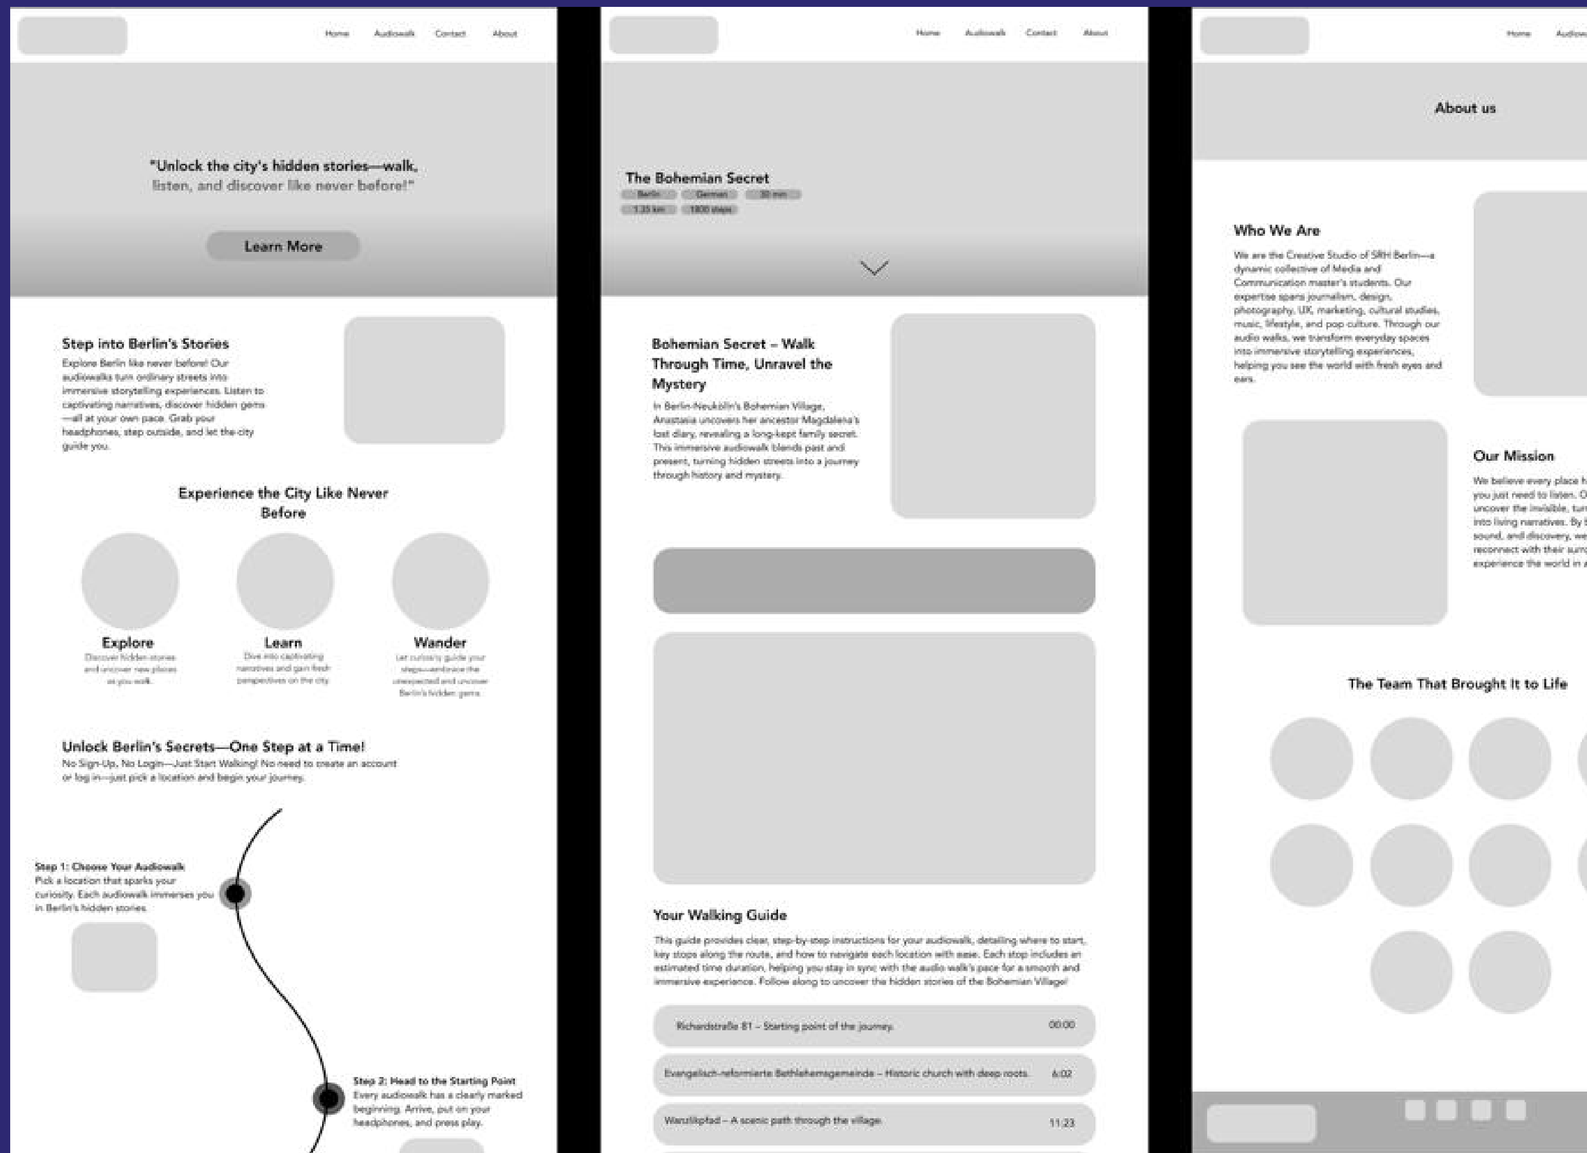

Icons

- Minimal line-style icons paired with clear labels
- Provide visual rhythm and support accessibility across devices
- Echo the narrative tone—simple, human, and uncluttered

Wireframes

The wireframes for the Homepage and Episode page laid the groundwork for a focused, emotionally resonant interface. The Homepage offers a gentle entry point with clear buttons and soft pacing, while the Episode page supports immersive listening through concise sections and embedded audio. Together, they shape a user journey rooted in presence and clarity.
