About Handic.app

Handic.app is a platform built to make concerts and events accessible for people with disabilities. It focuses on clear, reliable accessibility information and a fair ticket-booking experience, especially for wheelchair users who often face barriers in traditional event platforms. The brand’s mission is to remove uncertainty, highlight real accessibility options, and give disabled people the same freedom to enjoy nightlife and culture as everyone else.

About Handic.app

Mission

- Make concerts and events accessible for wheelchair users
- Provide clear, reliable accessibility information
- Create a fair and simple ticket-booking experience
- Ensure disabled people can enjoy nightlife without barriers

Vision

- A world where accessibility is the default, not an afterthought
- Equal access to culture, music, and events for everyone
- Event platforms that treat disabled users with fairness and transparency
- Becoming the go-to app for accessible event experiences

Target Group

Handic.app is designed for wheelchair users and people with mobility impairments who want to enjoy concerts and events without barriers. The platform focuses on making the ticket process easier, fairer, and more transparent. It also supports companion tickets, ensuring that users can attend events together with friends, family, or caregivers. The goal is to give disabled event-goers the same freedom and confidence to participate in nightlife and culture as everyone else.

User Persona

Name: Mike
Age: 17
Role: High school student
Personality: Extroverted, social, energetic
Mobility: Wheelchair user
Interests: Concerts, festivals, music, hanging out with friends
Pain Points:
Ticket platforms take much longer for him to use
Accessibility info is unclear or missing
Booking feels unfair compared to his friends
Needs & Goals:
A fast, fair, and simple ticket-booking process
Clear accessibility information before buying
Easy access to companion tickets

Design System

Accessibility

- High contrast & dark-mode friendly for visibility in concert environments
- Clear hierarchy so users instantly understand what matters
- Large, readable typography that works across all devices
- Simple, predictable navigation with no hidden actions
- Accessible iconography with universal, recognizable symbols
- Touch-friendly components designed for one-hand or limited-mobility use
- Consistent spacing & structure to reduce cognitive load
- Instant access to accessibility info as a core feature, not a submenu

But booking tickets isn't fair
